

Dixie Blue

Technical Requirements

ELECTRICAL CIRCUITS

We require at least one 20-amp, 120V grounded A/C circuits on individual breakers. They must be placed on or near the stage. Additionally, these circuits must be dedicated and not tied to stage dimmers, house lighting, etc.

SOUND

The band requires a closed-house sound check two hours prior to performance.

HOUSE SOUND SYSTEM

At the discretion of the band's audio engineer, if a house sound system exists, it may be preferable to use it to augment the audio equipment the band carries. Our audio engineer may contact the house audio engineer in advance of the performance date to discuss requirements/availability.

LIGHTING REQUIREMENTS

Overhead white light should be suitable to read music and make all band members visible to the audience.
